1. Скалар $\lambda \in \mathbb{R}$ је сопствена вредност матрице $A \in M_n(\mathbb{R})$ ако $(\exists \psi \neq 0, \psi \in \mathbb{R}^n)$ т.д. $A\psi = \lambda\psi$. Тада је ψ сопствени вектор матрице A који одговара сопств. вредности λ .

Скалар $\lambda \in \mathbb{R}$ је сопств. вредност $A \Leftrightarrow \varphi_A(\lambda) = 0$.

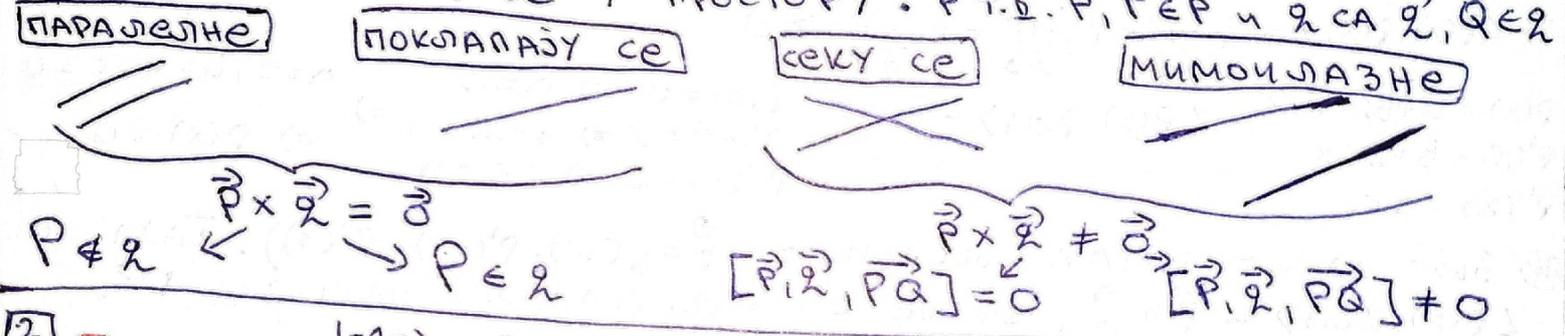

Минимални полином матрице $A \in M_n(\mathbb{R})$ је моничан полином најмањег степена ког поништава матрица A , т.д. $M_A(A) = 0$.

Нека је V (реални) векторски простор, скаларни производ на V је пресликавање $\langle \cdot, \cdot \rangle : V \times V \rightarrow \mathbb{R}$ такво да важи:

- 1) ЛИНЕАРНОСТ ПО \pm АРГУМЕНТУ: $\langle a\psi + b\phi, \eta \rangle = a\langle \psi, \eta \rangle + b\langle \phi, \eta \rangle$
- 2) КОМУТАТИВНОСТ: $\langle \psi, \phi \rangle = \langle \phi, \psi \rangle$
- 3) ПОЗИТИВНА ДЕФИНИТНОСТ: $\langle \psi, \psi \rangle \geq 0, \langle \psi, \psi \rangle = 0 \Leftrightarrow \psi = \vec{0}$

$W^\perp = \{ \psi \in V \mid \langle \psi, \eta \rangle = 0, \forall \eta \in W \}$

Однос две праве у простору: P т.д. $\vec{P}, P \in \mathbb{R}^3$ и Q са $\vec{Q}, Q \in \mathbb{R}^3$
